Art Unit: 2665

1. Claims 1-16, 34-36 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, line 14, claim 34, line 15, claim 35, line 15, claim 36, line 14, each recites the limitation "the message", in which there is insufficient antecedent basis for this limitation in each claim.

Claim 34, lines 2 and 4, each occurrence of "program code" should be changed to -- program codes-- to avoid the ambiguity with the other program codes recited in lines 5, 9, 12, 16 and 18.

Furthermore, in claim 35, lines 1-4, the preamble "A device for creating a computer digital signal for monitoring and controlling message delivery over a single point-to-point connection including a wireless link between a sending node and a receiving node, the computer digital signal comprising:" should be changed to --A computer-readable medium having computer-executable program codes embodied in said medium for monitoring and controlling message delivery over a single point-to-point connection including a wireless link between a sending node and a receiving node, the computer program codes comprising:-- for proper claim language recitation since a single device for creating a computer digital signal does not constitute any statutory subject matter.

2. Claims 1-16, 34-36 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

3. Claims 17-33 are allowed.

Art Unit: 2665

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

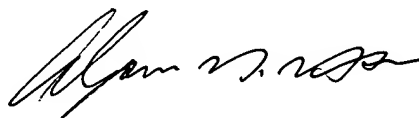

Livingston et al. '877 & '679, Woest et al., Ywoskus et al., Homma et al., Habusha et al. '498 & '144 are further cited to show the common feature of communication network control for message transmission and receipt utilizing timer and acknowledgement similar to the claimed invention.
